AI Powered WebCam Edge Station Dedicated for Smart Site Safety System (SSSS)

Vest Detection

Intrusion Detection

Fire Detection

Human Fall Down Detection
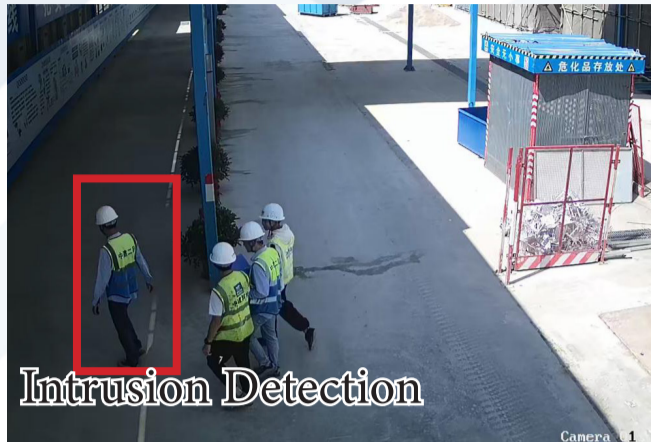

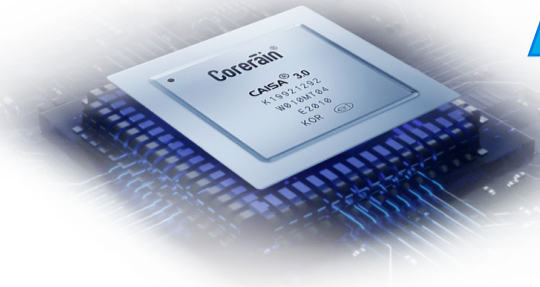

- High performance computing architecture designed for deep learning neural networks inference;
- Safety Monitoring System using Artificial Intelligence;
- Smart monitoring devices for workers and frontline site personnel;
- Basic 4 Channel supported (server station support up to 64 channels webcam);
- Helmet and Vest auto detection;
- Smoking and other danger activity auto detection available;
- Danger zone monitoring and other functions available;
- Support night time detection;
- As a plug-in to existing webcam system;
- A total non-disruptive upgrade solution;
- No need to change your existing webcams;
- API provided for system integration;
- Email alert provided;
- Tailor made AI function supported.
